

ABSTRACT OF THE DISCLOSURE

The present invention provides a magneto-resistance effect (hereinafter, referred to as MR) type composite head ^{The head includes} comprising a reproduction head including an MR element arranged between a ^{first} ~~first~~ and a second magnetic shield; and a recording head arranged ^{next} ~~adjacent~~ to the reproduction head so as to use the second magnetic shield as a first magnetic pole film and having a second magnetic pole film opposing to the first magnetic pole

via a magnetic gap; ^{including} the MR element ~~comprising~~ comprising: a center region including a ferromagnetic tunnel junction magneto-resistance effect film (hereinafter, referred to as a TMR film) having: a first ferromagnetic layer and a second ferromagnetic layer for generating a magneto-resistance effect using the first and the second magnetic shields as electrodes so that a current flows in an almost vertical direction between the first and the second magnetic shields; and a tunnel barrier layer provided between the first and the second ferromagnetic layer; and an end region arranged to sandwich the center region from both sides for applying a bias magnetic field to the center region.
